

SPLUNK DASHBOARD

TUTORIAL

Kandyce Diep

presentation edited to protect company privacy for internal tools

1) NAVIGATE TO METRIC LIST

✨ ensure that time range is set to All Time (not 24 hours)

- 1 Once logged in, navigate to "Search & Reporting"
- 2 Type your index search query into the Search bar
- 3 Press Enter or click the Search button to run the query

```
index = [your_index_name]
```

1) NAVIGATE TO METRIC LIST

Finding Your Fields

- Scroll down in the left sidebar after running your search
- Click "more fields" to expand the full attribute list
- This is your metric list — all available fields!

Pro Tip

Set the time coverage filter to "All fields" (not "1% or more") to see your complete metric list, otherwise some fields will be hidden!

2) ASK AI FOR VISUALIZATION IDEAS

Tips:

- Copy and paste your full attribute list and ask AI for visualization ideas
- If a stakeholder wants a dashboard for a specific audience, prompt AI with those requirements
- Choose chart type based on the intent (counts → single value, trends over time → line chart, etc.)

General SPL Query Structure

```
index = [your_index_name]
```

```
| <command> <argument>
```

```
| <command> <argument>
```

3) CREATING VISUALIZATION

1

Paste SPL Query

Paste your SPL query code into the Search bar and run it

2

Go to "Visualizations" tab

Click the "Visualizations" tab (the default view is the "Statistics" table)

3

Pick a Field to Explore

EX: exploring Workflow Status outcomes (choose a relevant field from your metric list)

default view is the "Statistics" table — always switch to Visualizations tab!

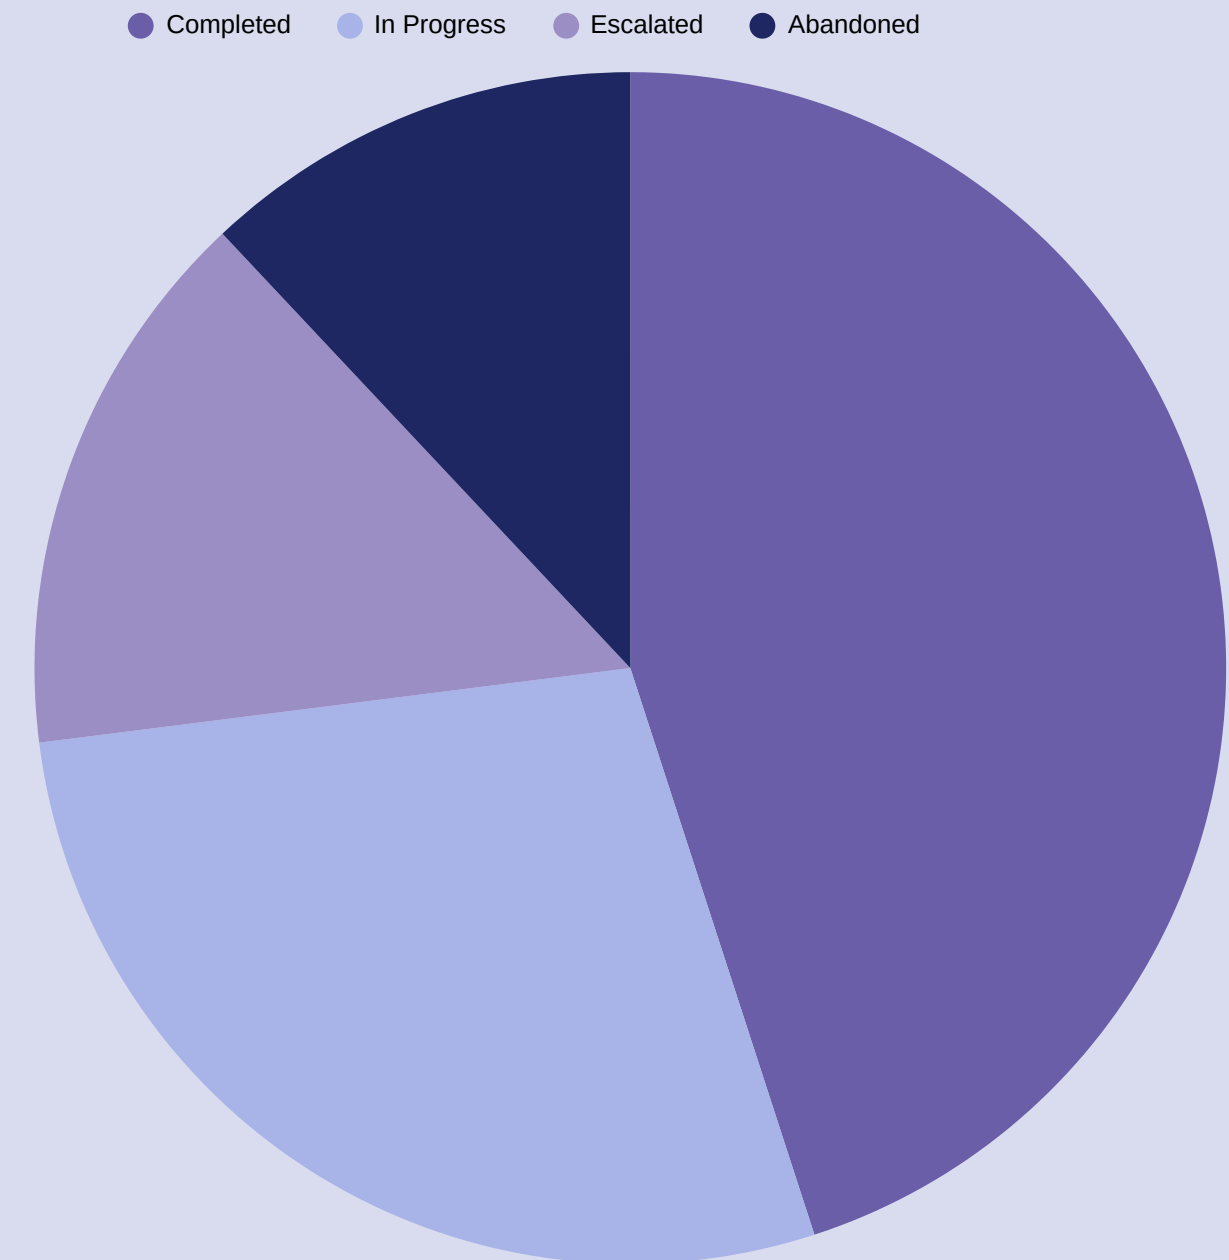

3) CREATING VISUALIZATION

Choosing Your Chart Type

- Click "Chart" to switch visualization types
- Browse available chart options
- Select the one that best shows your data's story

💬 Why Pie Chart?

A pie chart is great for showing distribution across categories — it makes it easy to spot which outcome is most common and compare proportions visually.

4) SAVING TO DASHBOARD

Click "Save As"

In the top-right of the Search page, click "Save As"

"Dashboard Panel"

Select "Dashboard Panel" from the dropdown menu

Select Your Dashboard

Choose an existing dashboard or create a new one to save your panel to

5) EDITING DASHBOARD

Polish Your Dashboard

- Navigate to your saved dashboard
- Click Edit to enter edit mode
- Write a non-technical title your audience will understand
- Add a plain-language description of what the panel shows

Best Practices

- Avoid jargon — write titles a non-technical reader would understand
- Describe the “so what” in your description, not just what the data is
- Group related panels together on the dashboard
- Save and preview to check how it looks

Finished Visualization!!

1 Navigate

2 Ask AI

3 Visualize

4 Save
